G NIHAL

Bengaluru, Karnataka nihalmohammad705@gmail.com +91-8431875440
github.com/nihal705 linkedin.com/in/gnihal705

Computer Science and Engineering student focused on software development, with project experience building web applications involving frontend interfaces, backend APIs, databases, and authentication. Interested in frontend, backend, and full-stack development, while continuously strengthening programming, problem-solving, and Data Structures and Algorithms skills.

TECHNICAL SKILLS

Languages	Java, JavaScript, Python, C#, SQL, HTML5, CSS
Frontend	React.js, Tailwind CSS, Responsive Web Design
Backend	Node.js, Express.js, ASP.NET, REST APIs, JWT Authentication
Databases	PostgreSQL, MongoDB, MySQL
CS Fundamentals	Data Structures, Algorithms, OOP, DBMS
Tools	Git, GitHub, Visual Studio Code

PROJECTS

SabAI Pay – AI-Powered UPI Payment Assistant

Tech Stack: React, Node.js, Express, Supabase PostgreSQL, Google Gemini AI, Razorpay, JWT

- Built a prototype AI-powered UPI payment assistant demonstrating Agent Pay and Reserve Pay through conversational, policy-constrained agentic payments
- Designed a separation-of-concerns architecture where Gemini proposes structured intents, a deterministic policy engine authorizes payments, and the payment engine executes auditable transactions
- Implemented AI chat flows for UPI payments, mobile recharge, bill payments, food ordering, auto-pay scheduling, and SabAI Gems cashback with Reserve Pay spending limits
- Integrated JWT authentication, mock bank/UPI flows, Razorpay test-mode payments, transaction auditing, and multi-payment method support across UPI, bank account, Reserve Pay, and SabAI Gems

Repository: github.com/nihal705/sabai-pay

MyCodeNotes – Full Stack Learning & Coding Platform

Tech Stack: React, Tailwind CSS, Python, FastAPI, PostgreSQL, SQLAlchemy, JWT, pgvector, RAG, Groq, Gemini

- Built a structured learning platform with four searchable, filterable modules — 110+ solved LeetCode problems, 240+ practice problems, 170+ concept references, and 11+ personal notes — with dual-language (Java/Python) solutions across Easy/Medium/Hard tiers
- Engineered NextraAI, a domain-specific AI assistant using retrieval-augmented generation (RAG) over 2,500+ pgvector-embedded content chunks, with tiered knowledge routing, SSE streaming, source citations, per-user rate limiting, and Groq → Gemini model fallback
- Developed a FastAPI + PostgreSQL REST backend (~50 endpoints, 17 SQLAlchemy-modeled tables) with JWT authentication, bcrypt password hashing, Pydantic validation, and email OTP signup — powering progress tracking, streaks, AI study plans, and timed mock tests
- Designed a responsive React frontend with dark/light mode, Framer Motion animations, a full-screen chat interface with voice input and multi-source context pinning, and PDF/CSV progress export, deployed on Vercel and Render with Git-based automatic deployments

Live Demo: https://mycodenotes.dev | Repository: github.com/nihal705/MyCodeNotes

InkWell – Multi-Author Article Publishing Platform

Tech Stack: .NET Web API, C#, Neon PostgreSQL, IMemoryCache, JWT, Docker, Vercel, Railway

- Built a full-stack editorial magazine platform supporting multi-author workflows, episodic series anthologies, and an administrative review desk with approval gating
- Architected a .NET REST API with EF Core, Neon PostgreSQL, and in-memory caching—eliminating N+1 query bottlenecks and achieving single-digit millisecond response times
- Implemented JWT auth with RBAC, Cloudinary asset pipelines, and a zero-dependency vanilla JS SPA with client-side routing —deployed via Vercel Edge CDN and Dockerized Railway

Live Demo: https://inkwell-magazine.vercel.app | Repository: github.com/nihal705/inkwell

EDUCATION & CERTIFICATIONS

Bachelor of Engineering (B.E.) – Computer Science & Engineering *2023 – 2027*

S.E.A College of Engineering & Technology
CGPA: 8.69

Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Software Engineering

Certifications: React and Redux | From Relational Model (SQL) to MongoDB's Document Model | Ethical Generative AI in Software Engineering
