github.com/nihal705 linkedin.com/in/gnihal705

Software Developer and Computer Science and Engineering student focused on building practical web applications and full-stack software solutions. Hands-on experience developing full-stack projects across frontend interfaces, backend APIs, databases, and authentication. Continuously strengthening software engineering and problem-solving skills through Data Structures and Algorithms and real-world project development.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, Python, Java, SQL, HTML5, CSS
Frontend	React.js, Redux, React Native, Tailwind CSS, Responsive Web Design
Backend	Node.js, Express.js, REST APIs, JWT Authentication
Databases	PostgreSQL, MongoDB, MySQL
CS Fundamentals	Data Structures, Algorithms, OOP, DBMS
Tools	Git, GitHub

PROJECTS

SabAI Pay – AI-Powered UPI Payment Assistant

Tech Stack: React, Node.js, Express, Supabase PostgreSQL, Google Gemini AI, Razorpay, JWT

- Built a prototype AI-powered UPI payment assistant demonstrating Agent Pay and Reserve Pay through conversational, policy-constrained agentic payments
- Designed a separation-of-concerns architecture where Gemini proposes structured intents, a deterministic policy engine authorizes payments, and the payment engine executes auditable transactions
- Implemented AI chat flows for UPI payments, mobile recharge, bill payments, food ordering, auto-pay scheduling, and SabAI Gems cashback with Reserve Pay spending limits
- Integrated JWT authentication, mock bank/UPI flows, Razorpay test-mode payments, transaction auditing, and multi-payment method support across UPI, bank account, Reserve Pay, and SabAI Gems

Repository: github.com/nihal705/sabai-pay

MyCodeNotes – Full Stack Learning & Coding Platform

Tech Stack: React, FastAPI, Vite, Tailwind CSS, Framer Motion, PostgreSQL, SQLAlchemy, JWT

- Built a structured learning platform spanning four modules — 50+ solved LeetCode problems, 180+ practice problems, 200+ concept references, and 9+ personal notes — each with search and filtering
- Implemented dual-language solutions (Java and Python) for every problem, organized across Easy/Medium/Hard difficulty tiers with pattern-based categorization
- Developed a REST API backend with FastAPI and PostgreSQL using SQLAlchemy ORM, JWT authentication, bcrypt password hashing, and Pydantic data validation
- Built a responsive React frontend with dark/light mode, Framer Motion animations, and PDF export for notes

Live Demo: mycodenotes.vercel.app | Repository: github.com/nihal705/MyCodeNotes

Weather App – Responsive Weather Forecast Application

Tech Stack: React, JavaScript, CSS, OpenWeather API, Vite

- Built a responsive weather application with city search, current conditions, and a 5-day forecast
- Integrated the OpenWeather API to surface six live metrics per city: temperature, feels-like temperature, condition, humidity, wind speed, and atmospheric pressure
- Implemented loading and error-state handling with reusable React components and a glassmorphism-style responsive UI

Live Demo: weather-app-nxhl.vercel.app | Repository: github.com/nihal705/weather-app

EDUCATION & CERTIFICATIONS

Bachelor of Engineering (B.E.) – Computer Science & Engineering *2023 – 2027*

S.E.A College of Engineering & Technology

Coursework: DSA, DBMS, OS, CN, Software Engineering

Certifications: React and Redux | From Relational Model (SQL) to MongoDB's Document Model | Ethical Generative AI in Software Engineering

ADDITIONAL INFORMATION

Languages: English, Kannada, Hindi
